Angular

Angular Course Contents

Topics	SubTopics
Introduction to Angular	• What is Angular?
	• Angular vs AngularJS
	• Angular versions and their differences
	• Angular CLI and project setup
TypeScript Basics	• Introduction to TypeScript
	• Data types and variables
	• Operators and decision-making constructs
	• Loops and arrays
	• Functions
	• Classes and inheritance
	• Interfaces
	• Generics
Components	• Introduction to components
	• Creating components manually and using CLI
	• Registering components in modules

	• Using registered components
	• Nesting components
	• Working with component templates and styles
	• Understanding component selectors
Data Binding	• Introduction to data binding
	• Property binding
	• Event binding
	• Two-way data binding
	• Binding to custom properties and events
	• View encapsulation
	• Local references in templates
	• Accessing template and DOM with ViewChild
	• Projecting content into components with ng-content
	• Component lifecycle hooks
Directives	• Introduction to directives
	• Using ngIf for conditional rendering
	• Using ngFor for lists
	• Styling elements dynamically with ngStyle
	• Applying CSS classes dynamically with ngClass
	• Creating basic attribute directives
	• Using Renderer for better attribute directives
	• Listening to host events using HostListener
	• Binding to host properties using HostBinding

Services and Dependency Injection	• Introduction to services
	• Creating logging and data services
	• Injecting services into components
	• Understanding hierarchical injectors
	• Injecting services into other services
	• Using services for cross-component communication
Pipes	• Introduction to pipes
	• Using built-in pipes
	• Parameterizing pipes
	• Chaining pipes
	• Creating custom pipes
	• Pure and impure pipes
	• Understanding async pipe
Routing	• Introduction to routing
	• Setting up routes
	• Navigating between pages
	• Passing parameters in routes
	• Lazy loading modules
	• Guarding routes
Forms	• Introduction to forms
	• Template-driven forms
	• Reactive forms

	• Validations
	• Custom validators
HTTP Client	• Introduction to HTTP client
	• Making GET, POST, PUT, DELETE requests
	• Handling errors
	• Interceptors
Angular Modules	• Introduction to modules
	• Lazy loading modules
	• Optimizing apps with modules
Angular Animations	• Introduction to animations
	• Creating basic animations
	• Advanced animations
Testing	• Introduction to testing
	• Unit testing
	• Integration testing
